DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bekki et al (US 6,716,390).

Bekki teaches an aluminum alloy extruded material comprising (in weight%): 2.6-5% Si, 0.15-0.3% Mg, 0.3-2% Cu, 0.05-1% Mn, 0.2-1.5% Fe, 0.2-2.5% Zn, 0.005-0.1% Cr, and 0.005-0.05% Ti (column 10 claim 1, etc.), which overlaps the presently claimed ranges of Si, Mg, Cu, Fe, Mn, and Cr.

Concerning the instant claim language of “excelling in caulking properties”, the examiner asserts that where the claimed and prior art products are identical or substantially identical in structure or composition, or are produced by identical or substantially identical processes, a prima facie case of either anticipation or obviousness has been established. *In re Best*, 562 F.2d 1252, 1255, 195 USPQ 430, 433 (CCPA 1977). “When the PTO shows a sound basis for believing that the products of the applicant and the prior art are the same, the applicant has the burden of showing that they are not.” *In re Spada*, 911 F.2d 705, 709, 15 USPQ2d 1655, 1658 (Fed. Cir. 1990). Because the prior art teaches a substantially overlapping alloy composition, processed in a substantially similar manner, then substantially the same properties, such as caulking properties, are also expected to result.

Overlapping ranges have been held to be a prima facie case of obviousness, see MPEP § 2144.05. It would have been obvious to one of ordinary skill in the art to select any portion of the range, including the claimed range, from the broader range disclosed in the prior art, because the prior art finds that said composition in the entire disclosed range has a suitable utility. Because Bekki teaches an overlapping alloying range, it is held that Bekki has created a prima facie case of obviousness of the presently claimed invention.
